

Thimblefuls

I have done a thorough search of all my thimble books and the internet, and I was surprised to find how little information there is on thimblefuls. There are two photos in one of McConnel's thimbles books, which confirm my findings that the Thimble Society of London has rarely had any of these for sale. There are no examples in the book on Settmacher in Austria, but there is record of a German advertising thimbleful, made by Gabler. Where there are brief mentions in the literature, I have included the photos. Johnson lists them under Novelties and Oddities. The exception to scant information is Holmes who has an entire chapter entitled Just a Thimbleful, which lends credence to collecting them. Gaussen maintains that thimblefuls are collected with sewing accessories because of their thimble shape.

As early as 1617 the thimbleful was accepted as an indication of measure. From then on there is a clear association of thimble shapes and drinking measures. The internet is peppered with references to Just a Thimbleful but rather as a figure of speech, indicating a small amount.

Spirit or tot measures have been made in the shape of thimbles since Victorian times as popular novelties. They are known by a variety of names: shot glasses, jiggers, stirrup cups and thimble cups. They replicate thimbles, down to the indentations and when placed with the open side up, the height measures, on average, 50mm. The base should be flat or able to stand on its own without wobbling. Some have indented bases, others are smooth. The traditional measure for a spirit measure is one ounce (1oz). Some have this measurement lettered on the base of the thimbleful. Thimblefuls can have a metal or enamelled badge applied for various events, tourist attractions or towns. Some of the Scottish thimblefuls are thistle-shaped; others are stemmed like a traditional goblet-shape (many of these are not marked as thimblefuls).

AMERICAN JIGGERS

Thimblefuls are made of glass, brass, aluminium, china or porcelain, copper, chromium or chromed metal, nickel silver, silver-plate, silver, pewter, plastic, wood and gold. In fact, they "come in any material you can pour drinks out of".

The lettering varies considerably; from **Thimble Full** (usually over two lines) - **Thimbleful - Just a Thimbleful - Just a Thimble Full** (most common form) - **Only a Thimbleful** or **Only a Thimble Full** (this appears to be American terminology) - **A Stitch in Time Saves Nine** - the four Scottish forms **A Wee Drappie - For Auld Lang Syne - A Wee Deoch and Doris - A Wee Deoch and Dorius** - and a newly discovered terms of **Just a Swallow** - all lettered across the top of the thimble when the thimbles are placed on the apex, with the open end upwards. The German lettering is **Nur Ein Fingerhut Voll**. In my opinion, the lettering is what makes a thimbleful. Without it, does it just become a spirit measure or jigger? and therefore outside the scope of this thimble topic. I have tried not to include any thimblefuls in shape when there is no lettering to indicate them as such.

Some would have been handmade. The rims are not commonly rolled, but examples exist with rolled rims. Most have the indentations going under across the base, a few are smooth.

In 1970, Cartier initiated a Gold Thimble award for outstanding fashion designers. It is about 76mm tall and made of silver gilt.

Johnson has a good selection of thimblefuls, showing the variety available, in both material, height and style.

I have not included large-sized china thimbles that usually stand on their open side, with no lettering of Thimblefuls. The exception is the crested china thimbles that Edwin Holmes included in his chapter on Thimblefuls.

It is interesting to find that some thimblefuls have their own thimble cases. They would be particularly useful for the fragile glass thimblefuls. It was rare to find one with a case but they are becoming available now thru ebay. The cases are made of cardboard or leather. The shapes vary from cylindrical boxes or those that are fitted to the thimble shape and that open sideways. I have included photos of the thimbleful containers where possible.

Metal thimblefuls

The largest group of thimblefuls is those made of metal. It is difficult to accurately describe the metals, and they are included in this section if they are **not** made of silver or pewter.

Charles Iles, and later **Iles & Gomms** of Birmingham, would have made the most commonly found thimblefuls - those made of cupro-nickel, chromed metal or silver-plated brass. Over time the some of the silver-plate has worn off, leaving the brass showing.

Iles, who had been producing thimbles since the 1860s, were the world's biggest producers of functional thimbles in the twentieth century until they ceased production in 1990.

Charles Iles registered his design for silver-plated brass thimblefuls with the R^D707065 and the lettering is Just a Thimble Full. He registered the design on 17 July 1924. The registered design included a crest attached to the side. The copyright was extended for four five-year periods and expired in July 1939, which attests to a popular design. Their production ceased in 1970.

SHOWING THE R^D 707065

CHARLES ILES
WITH A GLASS INSIDE

If you have a metal thimbleful where the words thimble and full are separate, with no rolled rim, the band that contains these words being half of the total height of 44mm, and the indentations going from there right under the thimble, you have an Iles-made thimbleful. It is a bonus when the RD No is included on the thimble.

NORTHERN RHODESIA ILES & GOMMS	BRITISH EMPIRE EXHIBITION 1924 CHARLES ILES	MELBOURNE ILES & GOMMS see also below

----- JUST A THIMBLE FULL -----

As can be seen, the enamelled crests that are applied to Iles thimblefuls are varied in shape and design. The list has **90** different places

Note that they seem to be made for countries of the British Commonwealth

The following list are of Iles thimblefuls with an enamelled crest made for the tourist market or as a commemorative

I have listed the lettering from the top as it appears on the badge and whether the Registration number appears on the thimbleful

It's wonderful to find a date as part of the crest – commissioned from Charles Iles or Iles & Gomms
Those with dates include

1925 – 1929 – 1937 – 1938 – 1940

THIMBLEFUL BOX
CHARLES EDWARD ILES, 1898

These thimblefuls with rolled rims, sometimes with a beaded band below the rolled rim and metal enamelled badges applied, are for a range of Australian cities and towns.

The indentations are dash-like and the bases are indented. Are they Australian made?

Some have an additional decorative surround to the badge.

They were available in shops in Australia in the 1950s. The word Thimble Full or A Thimble Full may be written, one word under the other, on some of these examples. The lettering also differs on some examples, from cursive to gothic. The shape of the badges are the same as those produced for teaspoons in Australia. The badges for those were made by **Stokes** of Ringwood, Victoria.

DARWIN N.T.

This group of thimblefuls are different enough not to be made by Charles Iles. The lettered band is much narrower, the dimpling is different, and the indentations go right under the base; only the lettering around the thimbleful is identical to that used by Iles. They mainly have a **small hole** near the lip of the thimbleful - was this to prevent thimble from overflowing if used as a spirit measure? The lettering is identical to the Iles thimblefuls. One or two of these examples also have a slightly flared rim, the plain band is nearly as wide as an Iles' thimbleful and they don't have a hole near the rim, whereas most of the other examples are quite straight sided right to the rim. They have a cross-hatched type of indentation.

Seven of the eight illustrated are for places in Australia!

Silver and gold thimblefuls

There is an enormous range of hallmark dates – from the mid 1800s right up to the turn of the 21st century – a long period for these thimblefuls to be made and remain popular.

Because of their size and weight British thimblefuls would have to be assayed in the pre-1884 era when all sterling silver thimbles required assaying. We can identify the makers of these Victorian silver thimblefuls. There are several examples with blue enamelled lettering. Were they produced by one maker who then registered another maker's marks to be placed on the thimbles?

You may spot six of the thimblefuls featured have a **Maltese cross** as part of the lettering band – some blue enamelled. I don't know of the significance of this cross. Do you?

Listed in alphabetical order by silversmith

19TH CENTURY SILVER, AND A SILVER-PLATED ONE BY ASPREY'S OF LONDON

Sterling silver from Taxco in Mexico. They are marked 925. The indentations are handmade and situated quite low down. The thimblefuls have the maker's mark for Rakhu Alecre on the base. The lettering is Thimble Full.

Norma Spicer, in her booklet on James Fenton, mentions a tot measure, which could be given as a gift or souvenir. "As they only hold three teaspoonsful, any Scotsman given a wee dram in one of these would have every right to feel deprived". The one shown is stemmed, in a goblet-shape, of sterling silver and hallmarked for 1898 with lettering For Auld Lang Syne around the top.

The second example from James Fenton is also stemmed hallmarked for Birmingham - coincidentally? - also 1892 and the stippled lettering is Just a Thimble Full.

I have included an example – for completeness where there is no lettering - by William Hutton & Sons and Fenton

The ultimate thimbleful to own would be that made by Charles Horner. In his sales catalogue this sterling silver thimble is named as a whiskey measure. It looks taller than other thimblefuls.

Known hallmark dates are from the 1910 and 1950s. The lettering is Just a Thimbleful.

Recently other examples have emerged, hallmarked Chester, 1947 and 1948.

Contrary to the advertisement for Horner thimblefuls, most are lettered Just a Thimbleful - the ad shows that it ends with -full. The indents continue under the thimbleful.

The distinctive T (longer downstrokes on the horizontal) on the word thimble, makes this silver thimbleful as different. There are indentations right across the base and the indents on the body are well-formed. Marked Sterling 651.

STERLING SILVER 651
JUST A THIMBLE FULL

This thimbleful has no distinctive marks but it is English and made of sterling silver'. The indentations are set slightly differently to that above. Sloping sides

SILVER
JUST A THIMBLE FULL

This thimbleful has one of the widest plain borders I have seen on thimblefuls. There is a rim of beading under the rim. Made in the USA, as the lettering is Only a Thimbleful.

Only a thimbleful

This is an unusual thimble in many aspects. I would presume it was made as a one-off gift. Firstly there is the actual Gothic lettering: Just a Thimble Full Old Man. This extra moniker makes one think of a gift – a gift from mates to a fellow drinking-friend.

Secondly there is ornate patterning below the lettering, which is a deeply engraved band with flowers and acanthus: not encountered before in this thimble topic.

Thirdly the indentations are handmade.

Finally there is a gold wash inner lining. There are no other marks – probably British made?

JUST A THIMBLE FULL
LETTERED ON A WIDE PLAIN BAND

This is a strongly indented German pewter thimbleful. It is lettered Nur Ein Fingerhut Voll. There is a paper sticker on the base which is lettered Zinn-Giesser-Innung Handelswerks-Siegel (translates as Pewter foundry craft seal)

NUR EIN FINGERHUT VOLL

This pewter thimbleful is made by Pinder Bros of Sheffield. The lettering is Just a Thimble Full. There is an extra mark of ABPC, which stands for Association of British Pewter Craftsmen.

Pewter thimblefuls were made by James Dixon & Sons, in Sheffield, England. The maker's details are lettered on the base, with a bugle trademark. It holds 1 PT (pint) and is 70mm in height.

This pewter thimbleful has a mark of Hoffritz Made in England lettered on the base.

China thimblefuls

Holmes shows a comprehensive selection of crested china and porcelain thimblefuls. Most of these stand on their open end like sewing thimbles. Makers here include those made in the Goss tradition (miniature white porcelain bearing an armorial crest).

Arkinstall & Sons in Stoke-on-Trent (1904-1924) with the backstamp for Arcadian (terrestrial globe with A&S) though other marks exist.

Wiltshaw & Robinson (1890-1910, with a swallow and WR) and Locke & Co of Worcester (1900-1904).

Other china brands include Willow Art China (1903-1905), Porcelle, Sussex China, and Swan China made by Charles Ford in Stoke-on-Trent (1900-1904).

All of these crested thimblefuls are lettered with some wording for a thimbleful.

In May 2008, a **Goss** thimbleful was for sale on ebay. The coat-of-arms is for Braemar, Fife. The lettering, which is across the outer apex, is identical to that that appears as below, inside the unmarked Reading thimble.

The lettering is for Just a Thimble-Full. The Braemar thimbleful is also the same as the Reading thimble in that the crest is on a smooth raised shield. There is a very clear Goss backstamp inside the thimbleful.

Other similar china thimblefuls are for Arms of Reading and Buxton. The lettering Just a Thimble-Full is on the inside rim. The coat-of-arms is on a raised smooth shield. There are no other maker's marks.

This is quite a recent addition – a new maker Swan China of England. The lettering on the verso is Tak a Thimble Full.

The Arcadian China of Stoke-on-Trent thimblefuls in THIRD AND FOURTH rows have a different lettering: Tak a Thimble – Full.
It is not lettered around the top of the thimble as is the norm on non-china thimblefuls but printed on the verso.

Glass thimblefuls

Slag glass is the residue from completed items in glassworks where iron is incorporated in the glass. The usual colours are opaque and mottled from purple to deep blues. The rims are usually very thick.

Thimblefuls of slag glass are associated with Sowerby & Co of Gateshead, which used the peacock's head in relief as their makers' mark, made between 1860 and 1880.

Other makers were Greener & Co and George Davidson & Co. The bases are indented.

This is a very interesting thimbleful sold on ebay in 2013. There is a R^D. 230818 lettered, which indicates the registered design issued to Saunders & Shepherd (UK) on 17 April 1894. Lettered Just a Thimbleful and there is a self-patterned daisy-pattern all over.

Plastic thimblefuls

One has to be careful when purchasing plastic thimblefuls. Unless they are indented to look like thimbles, they could be plastic beakers, dice cups etc.

Known as a barrel set, these four opaque plastic thimblefuls are housed in the brown-coloured plastic beaker. They are marked on the base Justa Thimble Full with an unknown maker's mark of a stylised crown. These are the first of the thimblefuls that I have encountered with the thimbleful lettering on the base.

Different packaging for the same clear plastic thimblefuls is a leatherette tubular zipped case.

Wooden thimblefuls

Robert Herron of Tasmania's thimblefuls are of Huon pine with cursive *Just a Thimbleful* pyrographed onto the thimbles. Doug Birrell of Melbourne has also produced wooden thimblefuls in various timbers with *Just a Thimble-Full* pyrographed. Herron's base is flat, Birrell has skilfully rounded his but there is no movement.
